

User story

- As a user, I want Home page will display events user plans on attending so that it is easy to see.

(-->Default page after login that will display the name of the event, the location, and the time.)

- As a user, I want My Event to display the reserved events by the user as a list sorted by date/time, so that I which of my events are coming up soon.

(-->My Events page sorted by time.)

- As a user, I want Navigation bar allow user to create an event and join an event so that I can create and join events easily.

(-->Buttons on the Home/Start page that will open up a new page for creating and joining an event.)

- As a user, I want the login screen to be the first page when I start the app so that users can login.

(-->The login screen should be the first page pops up when start the app; Username and password could be locally stored in app or stored in online database.)

- As a user, I want a profile page to store the information of a user, so that it can be seen by other users.

(-->Information include “name”, “attending rate” and “the user’s photo.”)

- As a user, I want the Join interface will list the events near the users, so that I can see what events I can join that is close to my location.

(-->Events page sorted by distance.)

- As a user, I want a new screen Event Details which will display information about the details of the event if the user clicks into a specific event, so that I can see more details about the event.

(-->Event Details shows details of a specific event when user clicks.)

- As a user, I want “name”, “location (visual, Google Maps)” and “time” and a button “Leave” to be shown if the event is already reserved by the user, so that I can choose to leave the event.

(-->Option to leave the reserved events.)

- As a user, I want “name”, “location (visual, Google Maps)” and “time” and a button “Join” to be shown if the event is not reserved by the user, so that I can choose to join the event.

(-->Option to join the unreserved events.)
