### Schedule for Event App

|        |                                                                                                                                                                                                                                                                    |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Week 1 | Create login page<br>Create back end database<br>Push dummy information to verify working state of database<br>Create profile page                                                                                                                                 |
| Week 2 | Create a “Event List” page (before “Create Event”)<br>Have app call events from the database and display it.                                                                                                                                                       |
| Week 3 | Work on the look of the “Event List” page<br>Work on host’s preference on how often/ how long beforehand to send reminders.<br>Navigation bar on Event Page <ul style="list-style-type: none"><li>• Test it with dummy create events/joining events page</li></ul> |
| Week 4 | Work on notifications.<br>Pull information from database (host reminders) and use that to trigger notifications.<br>Allow host to set up events and place relevant location on map.                                                                                |
| Week 5 | Work on filters (prefer certain types of events like sports)<br>Allow created events to be created with a “tag” that specifies its type.                                                                                                                           |
| Week 6 | Integrate maps on app so users can see where an event is taking place.                                                                                                                                                                                             |
| Week 7 | Implement chat room functionality (avoid revealing personal information)                                                                                                                                                                                           |
